Experiment-4

Student Name: Gautam Thakur
UID: 22BCS10628
Branch: BE-CSE
Section/Group: 22BCS-IOT-640-A
Semester: 6th
Date of Performance: 17/02/2025
Subject Name: PBLJ with Lab
Subject Code: 22CSH-359

1. **Aim:** Develop Java programs using core concepts such as data structures, collections, and multithreading to manage and manipulate data.

2. **Problem Statements:**
   Problem 1.1: Write a Java program to implement an ArrayList that stores employee details (ID, Name, and Salary). Allow users to add, update, remove, and search employees.
   Problem 1.2: Create a program to collect and store all the cards to assist the users in finding all the cards in a given symbol using Collection interface.
   Problem 1.3: Develop a ticket booking system with synchronized threads to ensure no double booking of seats. Use thread priorities to simulate VIP bookings being processed first.

3. **Implementation/Code:**

Problem 1.1

```
import java.util.ArrayList;
import java.util.Scanner;
class Employee {
    private int id;
    private String name;
    private double salary;

    public Employee(int id, String name, double salary) {
```

```
    this.id = id;
    this.name = name;
    this.salary = salary;
}

public int getId() {
    return id;
}

public String getName() {
    return name;
}

public double getSalary() {
    return salary;
}

public void setName(String name) {
    this.name = name;
}

public void setSalary(double salary) {
    this.salary = salary;
}
```

```
    @Override
    public String toString() {
        return "ID: " + id + ", Name: " + name + ", Salary: $" + salary;
    }
}

public class EmployeeManagementSystem {
    private static ArrayList<Employee> employees = new ArrayList<>();
    private static Scanner scanner = new Scanner(System.in);

    public static void main(String[] args) {
        while (true) {
            System.out.println("\n1. Add Employee");
            System.out.println("2. Update Employee");
            System.out.println("3. Remove Employee");
            System.out.println("4. Search Employee");
            System.out.println("5. Display All Employees");
            System.out.println("6. Exit");
            System.out.print("Enter your choice: ");

            int choice = scanner.nextInt();
            scanner.nextLine(); // Consume newline
```

```
            switch (choice) {
                case 1:
                    addEmployee();
                    break;
                case 2:
                    updateEmployee();
                    break;
                case 3:
                    removeEmployee();
                    break;
                case 4:
                    searchEmployee();
                    break;
                case 5:
                    displayEmployees();
                    break;
                case 6:
                    System.exit(0);
                default:
                    System.out.println("Invalid choice. Please try again.");
            }
        }
    }
```

```
    private static void addEmployee() {
        System.out.print("Enter employee ID: ");
        int id = scanner.nextInt();
        scanner.nextLine(); // Consume newline
        System.out.print("Enter employee name: ");
        String name = scanner.nextLine();
        System.out.print("Enter employee salary: ");
        double salary = scanner.nextDouble();

        employees.add(new Employee(id, name, salary));
        System.out.println("Employee added successfully.");
    }

    private static void updateEmployee() {
        System.out.print("Enter employee ID to update: ");
        int id = scanner.nextInt();
        scanner.nextLine(); // Consume newline

        for (Employee emp : employees) {
            if (emp.getId() == id) {
                System.out.print("Enter new name (press enter to skip): ");
                String name = scanner.nextLine();
                if (!name.isEmpty()) {
                    emp.setName(name);
```

```
            }

            System.out.print("Enter new salary (enter 0 to skip): ");
            double salary = scanner.nextDouble();
            if (salary != 0) {
                emp.setSalary(salary);
            }

            System.out.println("Employee updated successfully.");
            return;
        }
    }
    System.out.println("Employee not found.");
}

private static void removeEmployee() {
    System.out.print("Enter employee ID to remove: ");
    int id = scanner.nextInt();

    for (int i = 0; i < employees.size(); i++) {
        if (employees.get(i).getId() == id) {
            employees.remove(i);
            System.out.println("Employee removed successfully.");
            return;
```

```
            }
        }
        System.out.println("Employee not found.");
    }

    private static void searchEmployee() {
        System.out.print("Enter employee ID to search: ");
        int id = scanner.nextInt();

        for (Employee emp : employees) {
            if (emp.getId() == id) {
                System.out.println("Employee found: " + emp);
                return;
            }
        }
        System.out.println("Employee not found.");
    }

    private static void displayEmployees() {
        if (employees.isEmpty()) {
            System.out.println("No employees to display.");
        } else {
            for (Employee emp : employees) {
                System.out.println(emp);
```

```
            }
        }
    }
}
```

Problem 1.2:

```
import java.util.*;

class Card {
    private String symbol;
    private String value;

    public Card(String symbol, String value) {
        this.symbol = symbol;
        this.value = value;
    }

    public String getSymbol() {
        return symbol;
    }

    @Override
    public String toString() {
        return value + " of " + symbol;
```

```
    }
}

```

(Fig. 3- Problem 1.3 Output)

5. Learning Outcome:

1. Learn how to use ArrayList to store and manage objects dynamically.
2. Learn how to use the Collection interface to store and retrieve custom objects efficiently.
3. Understand thread synchronization to prevent data inconsistency in concurrent environments.
4. Learn how to prioritize VIP bookings using thread priorities and ExecutorService for better concurrency control.
